Project Title	Darshan Ease – Temple Darshan Ticket Booking System
Maximum Marks	5 Marks

Project Proposal (Proposed Solution) report

This proposal outlines Darshan Ease, a web-based platform that digitizes the temple darshan ticket booking process. It addresses long queues and uncertain slot availability by giving devotees a secure, easy-to-use system to register, view real-time darshan slots, and book tickets online. Key features include JWT-based authentication, real-time slot browsing, and instant electronic ticket confirmation.

Project Overview	
Objective	To simplify and digitize the temple darshan ticket booking process, enabling devotees to register, register, browse darshan tickets, place orders, and manage their bookings online. , and securely book darshan tickets online.
Scope	The project includes user registration and login, browsing darshan ticket products, placing orders, viewing order history, profile management, and a REST API using Node.js, Express, and MongoDB.
Problem Statement	
Description	Devotees currently rely on offline counters, phone helplines, or outdated websites to book temple darshan tickets, resulting in long queues, uncertain slot availability, and no centralized digital record of bookings.
Impact	Solving this will reduce waiting times, give devotees real-time visibility into improve online ticket booking, reduce waiting time, and simplify order management., improve booking reliability, and streamline slot and order management for temple administrators.
Proposed Solution	
Approach	Build a full-stack web application – a React.js frontend and a Node.js/Express.js backend following the MVC architectural pattern, backed by a MongoDB database – exposing secure REST APIs for authentication, products, orders, and profile management.
Key Features	- Secure User Registration & Login (JWT) - Browse Darshan Ticket Products - Place Orders - View Order History - User Profile Management

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	CPU specifications, number of cores	Standard multi-core CPU (e.g. Intel i5 / equivalent) – no GPU required
Memory	RAM specifications	8 GB (development machine)
Storage	Disk space for code, dependencies, and database	Approx. 1–2 GB local + MongoDB Atlas (free tier, 512 MB) or local MongoDB storage
Software		
Frameworks	Frontend / backend frameworks	React.js (frontend), Express.js on Node.js (backend)

Libraries	Additional libraries	mongoose, jsonwebtoken, bcrypt, cors, body-parser, axios, react-router-dom
Development Environment	IDE / runtime	VS Code, Node.js runtime, npm, Thunder Client / Postman
Data		
Data	Source, size, format	Application-generated data stored in MongoDB collections: Users, Products, Orders (JSON documents)
