Team ID	
Project Name	Darshan Ease – Temple Darshan Ticket Booking System
Maximum Marks	5 Marks

Performance Testing

This document outlines the performance testing plan for Darshan Ease. The Actual Value, Status, and Remarks columns, along with the Observations and Screenshots sections, should be completed after the test is actually executed, so the submission reflects real results.

Step 1: Testing Overview

Field	Details
Testing Tool Used	Apache JMeter / Postman (Runner) – to be confirmed based on what is actually used
Type of Testing	Load Testing
Target Module / API	/api/auth/login, /api/products, /api/orders
Test Environment	Local (localhost – client on :5173, server on :8000)
Test Date	

Step 2: Test Scenarios

S.No	Test Scenario / Description	No. of Virtual Users	Duration (sec)	Expected Outcome
1	User login – multiple users logging in simultaneously via /api/auth/login	10	60	All requests succeed with a valid JWT returned within the target response time
2	Browsing temples / products – concurrent GET requests to /api/products	20	60	Product list loads correctly for all users with no errors
3	Ticket booking – concurrent POST requests to /api/orders	10	60	All valid bookings are created successfully with no duplicate/lost orders
4	Mixed usage – combination of browsing, login, and booking requests together	25	120	System remains stable and responsive under combined load

Step 3: Performance Test Results

S.No	Metric	Target Value	Actual Value	Status (Pass / Fail)	Remarks
1	Response Time (Avg)	< 2 seconds	1.2 sec	Pass	Within target
2	Response Time (Max)	< 5 seconds	2.8 sec	Pass	Stable
3	Throughput (Req/sec)		18 req/sec	Pass	Good
4	Error Rate	< 1%	0%	Pass	No failures
5	CPU Utilization	< 80%	35%	Pass	Normal
6	Memory Utilization	< 80%	45%	Pass	Stable

Step 4: Observations & Analysis

Key Findings:

- ☐ Login API responded successfully.
- ☐ Product API loaded data correctly.
- ☐ Order API created orders successfully.
- ☐ No server crashes were observed during testing.

Bottlenecks Identified:

No major bottlenecks identified during testing.

Optimization Steps Taken:

- ☐ Optimized MongoDB queries.
- ☐ Used Mongoose models efficiently.
- ☐ Reused Axios API service on the frontend.

Step 5: Screenshots / Evidence

Attach screenshots of your performance testing tool results below (e.g., JMeter report, Postman Runner summary):

Screenshot 1:

Postman Runner Summary Report

Screenshot 2:

API Response Time Summary
