Technology Stack

Date	02 July 2026
Team ID	
Project Name	Darshan Ease – Temple Darshan Ticket Booking System
Maximum Marks	2 Marks

Define Your Technology Stack:

Identify the programming languages, frameworks, databases, front-end tools, back-end tools, and APIs that you will use to build your solution. A well-chosen technology stack ensures that your application is scalable, maintainable, and aligned with your project requirements.

Fill out the table below to detail the specific technologies chosen for each component of your architecture and provide a brief justification for your choice.

Technology Stack Details

S.No	Architecture Component / Layer	Technology Chosen	Justification / Purpose
1	Frontend / Client-Side	React (with React Router)	Component-based structure made it easy to build reusable UI pieces (Register, Login, Products, Orders, Profile), and its virtual DOM keeps the booking interface fast and responsive.
2	Backend / Server-Side	Node.js with Express.js	JavaScript across both frontend and backend simplified development; Express's lightweight routing and middleware (cors, body-parser) made it quick to build the REST APIs for authentication, products, orders, and user profile.
3	Database / Data Storage	MongoDB (with Mongoose)	A flexible, schema-based NoSQL database suited the evolving structure of users, products, and orders., and Mongoose made it straightforward to define models and run CRUD operations.
4	Cloud / Hosting / Deployment	Local development environment (Node/Express server and MongoDB instance run on localhost)	Sufficient for building, testing, and demonstrating the project within the internship timeline; hosting on a service such as Render or Vercel is a natural next step beyond this scope.
5	Version Control & CI/CD	GitHub	Used to store the codebase, track changes to routes/controllers/models, and share the repository link for project review.
6	Third-Party APIs / Other Tools	None integrated in the current scope	The project currently focuses on the core registration, product management, and order management workflow.; a payment gateway (e.g., Razorpay/Stripe) is identified as a future enhancement.
